

CMT's Precision Dado Sets are designed to set a new standard in performance, and they're now available in 6" or 8" diameter. The new 6" dado is perfect for smaller or somewhat underpowered table saws, like the typical 10" contractor saw. Both of these great tools offer features that make them ideal for any cabinetshop, including:

- Anti-kickback design to reduce the possibility of overfeeding that can occur when cutting mass material.
- Splinter-resistant cuts in veneer plywood, melamine and hard or soft woods.
- Four-tooth chippers that keep the cut flat & virtually free from tear out.
- 3/32" chipper made especially for undersize plywood.
- Shim sets included for cuts between 1/4" and 29/32".

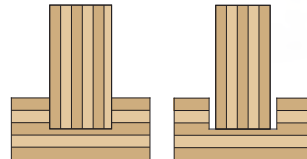

230

CMT's Precision Dado Set delivers splinter-resistant cuts in all wood, plywood and wood composites.

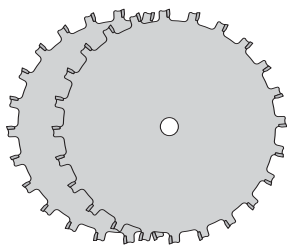

Sturdy reusable carrying case.

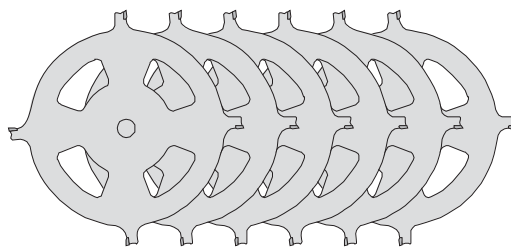

Our special 3/32" chipper lets you adjust for undersize plywood.

Slot width inches	No. Chippers Required
